

Wooden Bench / Horse Dismount

The wooden bench / horse dismount design has been used heavily on the THT. It serves as a bench for rest, but also a place where horseback riders can mount/dismount a horse easily. This is a feature of a trail built with equestrian use in mind. This design is very low cost and has served the Trail well over the years. This updated version adds a back for comfort. Final plans will include step by step detailed drawings that a volunteer can use to build the bench to THT specifications.
